

Entryways

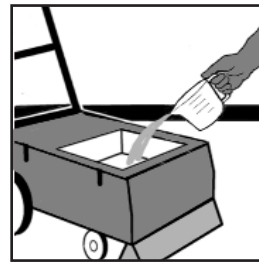

Entryway Cleaning and Maintenance Requirements

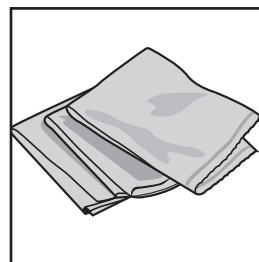

1. Use only high quality matting.

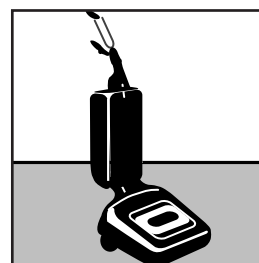

2. Especially during times of inclement weather, ensure that interior matting is at least 12 to 15 ft. in length.

3. Ensure that mopping solutions are kept clean and are mixed accurately.

4. Use micro-fiber wiping cloths and flat mops.

5. Use vacuums that meet certification requirements under the Carpet & Rug Institute's Green Label Program. Vacuum both directions. Check and change bags and filters as needed (*as often as necessary depending on weather and soil loads*).

6. When using ice-melting products, it is preferable to use compounds containing potassium or magnesium chloride.
