

# Carpet Care

## General Maintenance Requirements

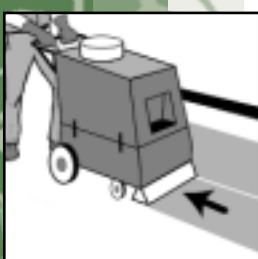

1. Always maintain entryways to prevent soils from being tracked into building onto carpet.

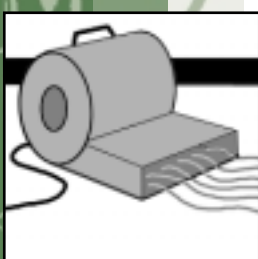

- Frequently vacuum entryway mats.
- Frequently dust mop resilient floors.

2. Use entry mats to capture soils and moisture from shoes.

3. Ensure that all equipment functions appropriately, especially extraction equipment.

4. Increase ventilation to dry carpets quickly. The goal should be to completely dry carpet in 24 hours.

**Note:** It is preferable to use vacuum cleaners that meet the Carpet & Rug Institute's Green Label Program requirements.
